Hao Yan, AI Technical Director
Teong Chin, Teh, Multimedia Director

Boost aims to create an AI Telemedicine Platform for seniors and their caregivers. The first of its kind in the world, where medical and related care information is available at anyone's finger tips. This will provide Round-the-Clock support to millions of seniors and their caregivers, speedily sharing and collating senior care and best practices.

According to a report published by Fortune Business Insights, titled “Telehealth: Global Market Analysis, Insights, and Forecast, 2019-2026,” The Global Telehealth Market was valued at US$ 49.8 Bn in 2018. Fortune Business Insights has predicted that the market will reach US$ 266.8 Bn by 2026.

By 2030, Alzheimer Disease will also be the most common cause for 75 million patients with Dementia worldwide.

To help alleviate the imploding geriatric care shortage, Boost will merge data science, AI, IOT, medical practice and social services to chart the future of round-the-clock senior care strategies.

It will be the world’s 1st AI Senior Telemedicine Platform offering 24-hour monitoring, with vocal, facial and motion recognition, a virtual medical and advisory hub with nursing station support, personalized chat-bot, including gamified eLearning leading to certifications for care givers, wealth and legal management, in a planet-wide town-hall of associated members.

Target Subscribers: Worldwide

- Seniors above 50 years of age
- Seniors Caregivers

Revenue Stream

Membership:

There are three payment methods for registration：

1. Basic membership fee: $50 USD per month

Service: Daily update of health information and access to senior medical resources including interactive tracking of health assessment and records with cupid-robot, certification courses for care providers, virtual town-hall chat offering intra-community

support for the elderly, 24/7 nurses' station helpline access and online doctor consultation service once a week.

2. VIP membership fee: $150 USD per month

In addition to basic membership benefits, preventive consultation services and regular follow-up services have been added. Prevention is better than cure. In the six years before the onset of dementia, it can be predicted through continuous tracking and prediction of brain computer tomography. This VIP service is a full set of regular medical care services for busy managers and commissioners of large companies.

3. Online Consultation Fee: online instant doctor consultation service, the service charge method will be based on the content and length of the consultation.

- Healthcare Product Sales
- Healthcare Advertising
- Website Forum Rental

Boost Four Development Phases

Phase 1 - Conduct and Collate Big Data Research on Senior Medical and Financial Challenges.

Phase 2 - Design AI Machine Learning for Data Analyses and Prediction.

Phase 3 - Design and Develop Professional eLearning Gamification Courses.

Phase 4 - Implementation of 24/7 Round-the-Clock Care/Conference & Townhall Chat.

Technology can help resolve many of the world's problems. Bringing together the best in Tech, AI & Medical Practice, Boost hopes to supplement senior care in the near future. Join us in creating the world's first Senior AI Telemedicine Platform - Boost!
